The Inspiration for ADAPT

The Need of a Rosetta Stone

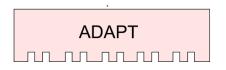

Interoperability Glossary

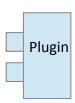

Farm Management Information System – could be desktop, mobile-based, web/cloud/...

Mobile Implement Control System – "equipment display" or system that collects field data or executes work instructions (from FMIS)

ADAPT Framework – AgGateway open source SDK, integrated into FMIS systems under AgGateway licensing terms

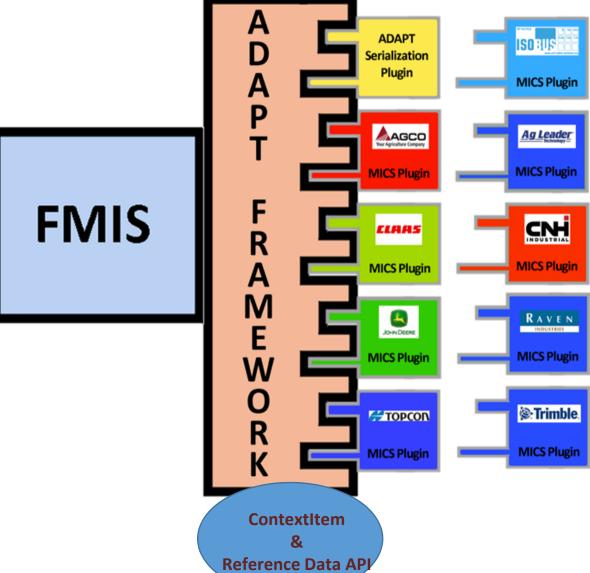

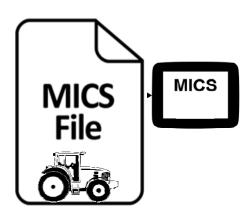

ADAPT Plugin – specific data conversion plugin which can be easily integrated into a specific instance of ADAPT. Created by manufacturers and FMIS to allow them to read/write in ADAPT.

Readable Data

ADAPT
Serialization
Plugin

Proprietary Data

The 5 Primary Components of ADAPT

	1. ADAPT Data Model	The data elements needed in a wide variety of field operations
ADAPT	2. ADAPT Framework	Framework managing plugins and data pass through
Plug-in	3. OEM Plug-ins (proprietary)	Created and licensed from a terminal manufacturer on how their data system maps into the ADAPT data model
Plug-in	4a. ADM Serialization Plug-in (open-source)	Used to transfer data from one system supporting ADAPT to another (FMIS ADAPT to FMIS ADAPT)
Plug-in	4b. ISO Plug-in (open-source)	Plug-in that will be AEF conformance tested for compatibility with the ISO11783 standard
REST	5. Reference Data API (open-source)	A RESTful API that provides machine-readable ContextItem Definitions to identify geopolitical-context-dependent data

1. ADAPT Common Data Model

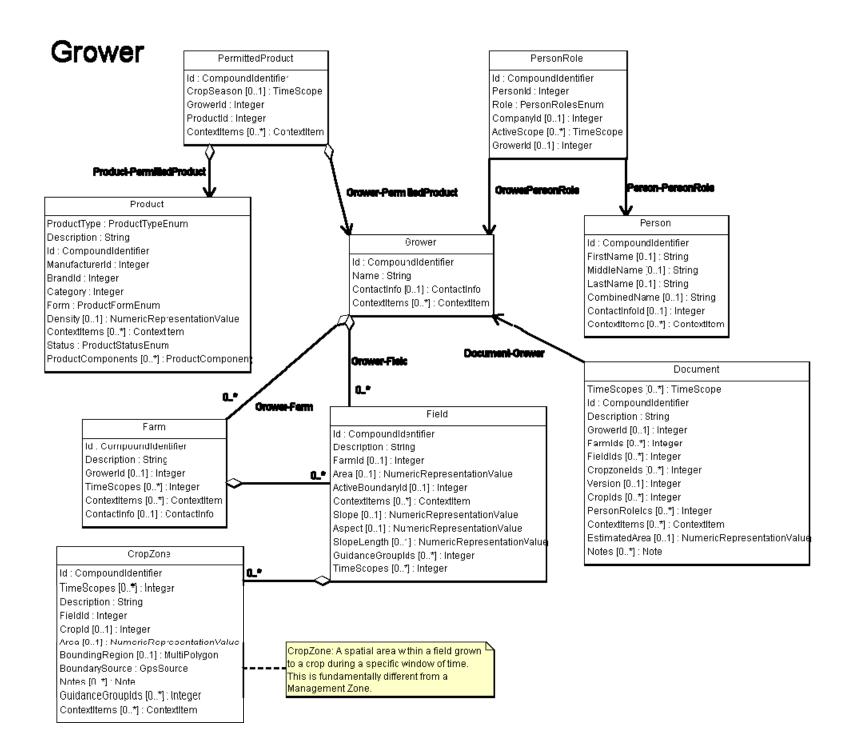

The Rosetta Stone of ADAPT

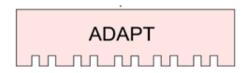

- ADAPT's power is in its common object model
- A common object model for describing field operations, implemented as a collection of extensible business objects
- It is used to map concepts between various proprietary languages

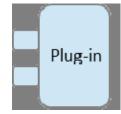

2. Plugin Framework

Framework managing plugins and data pass through

3. OEM Proprietary Plugins

Created and licensed from a terminal manufacturer on how their data system maps into the ADAPT data model.

4. Open-Source Plugins

ADM Serialization Plug-in

- Used for lossless transfer data from one system supporting ADAPT to another
- FMIS ADAPT → FMIS ADAPT

ISO Plug-in

 Plug-in that will be AEF conformance tested for compatibility with the ISO11783 standard

5. Reference Data API:

Making ADAPT work globally

Geopolitical-Context-Dependent Data

- Each region/country/province has its own geopolitical identifiers
- Need controlled vocabularies ("We call it this/You call it that")
 - product names, specifications, seed brand, type, traits
- These references will be constantly modified
- So, the SPADE Team implemented a RESTful API to provide a updated machine-readable vocabulary of ContextItemDefinitions;
- "Reference Data API" only uses the identifier you need based on location

Reference Data API

ContextItems

ContextItem

Code: String

Value [0..1]: String

ValueUoM [0..1]: String

TimeScopes [0..*]: TimeScope

NestedItems [0..*] : ContextItem

•Code: What a given ContextItem contains:

•Value: Identifying number (e.g. Gov. ID, geolocation, regulatory number)

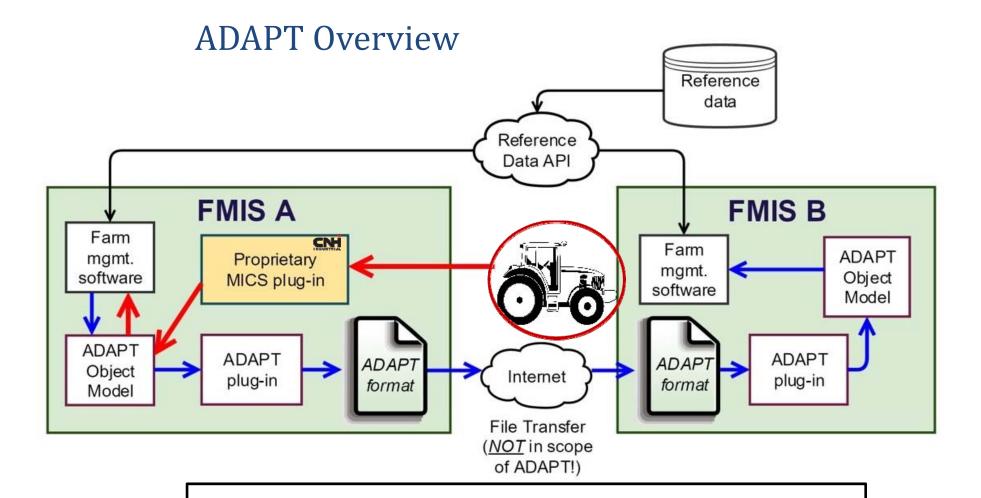

•ValueUoM: Unit of measure for Value.

•TimeScopes: Temporal context.

•NestedItems: Used for multi-attribute data. Enables a hierarchical organization of nested ContextItems (e.g. survey connected to a field)

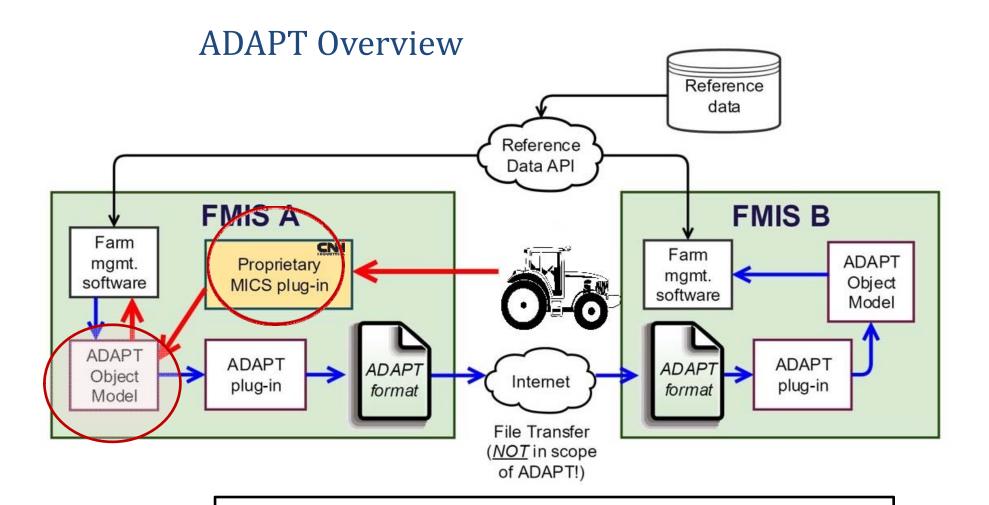

- The red arrows show data import from a farm machine.
- The blue arrows show an FMIS-to-FMIS data transfer.

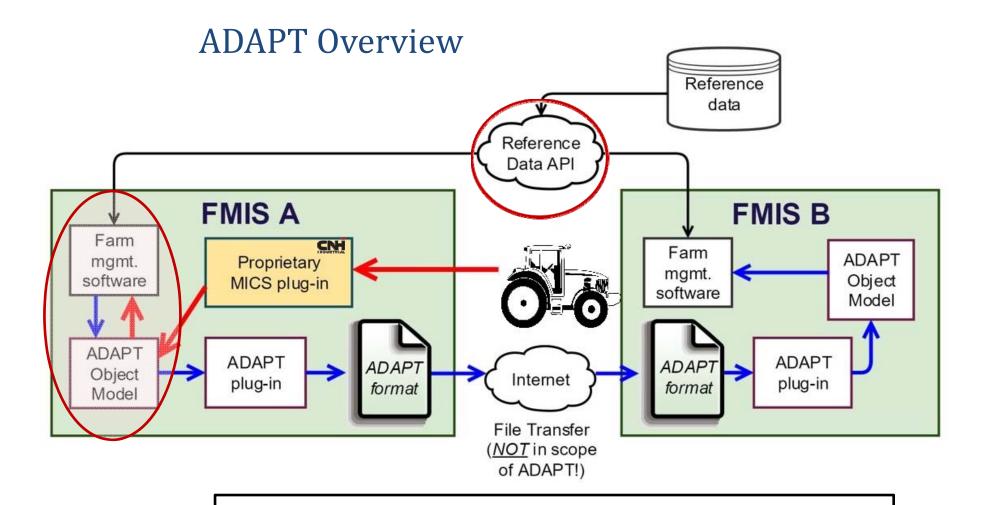

The red arrows show data import from a farm machine.

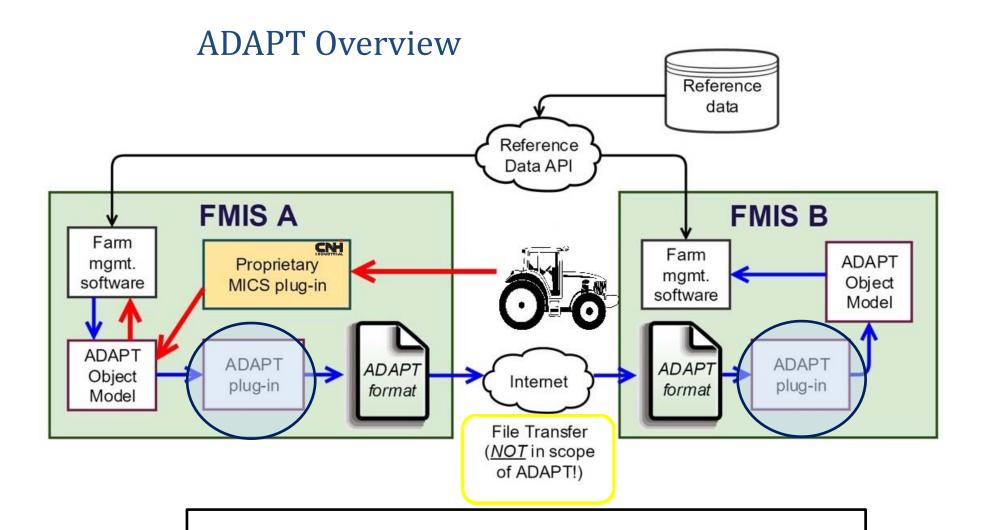

• The **red** arrows show data import from a farm machine.

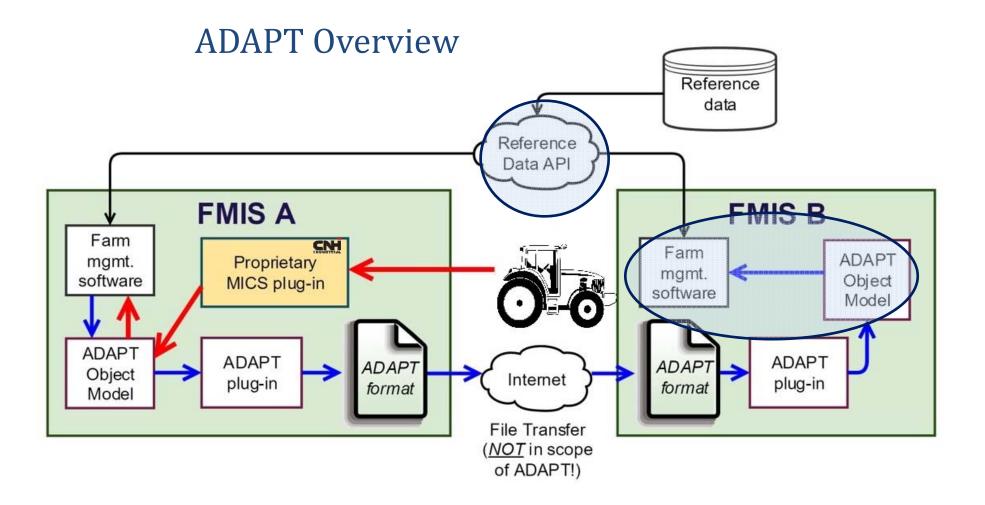

The blue arrows show an FMIS-to-FMIS data transfer.

The blue arrows show an FMIS-to-FMIS data transfer.

ADAPT is an Open Source Software (OSS) project

Business Advantage:

- An Open Source <u>community</u> provides a way for individuals and companies to collaborate on projects that would be difficult to achieve on their own.
- No service fees.

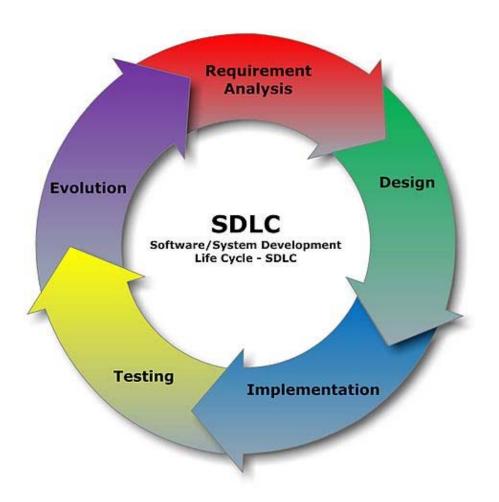

Technical Advantage:

• With source code readily available, users will help you debug quickly and <u>promote</u> <u>rapid code enhancements</u>.

ADAPT Status: Ever Evolving

Future direction

- Technical
 - Include Observations & Measurements
 - Full integration of PAIL
 - Containers, container use, supply-chain interfacing
 - Extensible, API-mediated representation system
- Business & Technical
 - Recruit more plug-in writing companies
 - Work on encapsulating report descriptions
 - Incorporating a more formal provenance model

Committed to Support ADAPT

Committed to Plugin

- AGCO Corporation
- Ag Leader
- Claas
- Case IH
- Climate Corporation
- Deere & Company
- Hemisphere GNSS
- Kverneland
- Müller-Elektronik
- New Holland
- Praxydin
- Premier Crop Systems
- Raven Industries
- Topcon Precision Agriculture
- Trimble Navigation
- IoF 2020 (Proof of Concept)

Committed to Integrate Framework

- 365FarmNet
- Ag Connections (Syngenta)
- Ag Integrated Corporation
- Agrian
- Conservis
- EFC Systems
- Fairport Farm Software
- Kverneland
- Mapshots (Corteva)
- Premier Crop
- MyAgData
- Red Wing Software
- SSI/AgVance
- TechnoFarming
- ZedX

Getting Started Talk to Others in the Community

Many resources are available at AdaptFramework.org
